Technology package	CONCENTRATES AS LEAST COST EFFECTIVE FEEDING OPTIONS FOR FINISHING BROILERS
Summary	Two Broiler Finisher Concentrates have been released on May 5, 2011 to the farming communities to address the rising cost of commercial feeds for broiler chickens. They are Low Energy Concentrate (LEC) to be used with sweet potato and High Energy Concentrate (HEC) to be used with cassava for finishing broilers to maturity. This research was done to reduce costs for farmers who raise broiler chickens. It addresses the rising cost of feeding broilers by smallholder farmers and improves their competitiveness in the broiler market.
